

Coquitlam's New Pesticide Use Control Bylaw

Since Coquitlam City Council adopted the Pesticide Use Control Bylaw No. 4254 on _____, 2012, many pesticides can no longer be used for garden and lawn beautification or maintenance on residential and City land, even if they are legally allowed for sale. This Bylaw regulates the use of pesticides on all residential and City-owned land within Coquitlam.

Are all pesticides now restricted?

Most conventional pesticides, including products labeled herbicide, insecticide, fungicide or combined fertilizer/herbicide products (often referred to as "weed and feed") are now restricted, except:

- ✱ Pesticides listed as Permitted Pesticides on the other side of this notice, and
- ✱ Biological pest controls (including nematodes, lady beetles and bacterial pesticides such as *Bacillus thuringiensis* or Bt).

How do I know if a pesticide is restricted or permitted?

Read the label. Common active ingredients in most conventional pesticides, such as 2,4-D, Mecoprop, Dicamba, Glyphosate, Carbaryl and Malathion are now restricted under the Bylaw.

However, many safer alternatives are available, effective and exempt from the Bylaw. If the active ingredient of your product is on the Permitted list on the other side of this notice, it is still allowed by this Bylaw.

Who do I contact about this Bylaw?

The City's Pesticide Use Control Bylaw No. 4254 and related information is available on the City's website at www.coquitlam.ca/pesticides. If you have any questions or comments, please call 604-927-3583.

Coquitlam

List of Permitted Pesticides

Approved by the City of Coquitlam's Pesticide Use Control Bylaw No. 4254.

- ✓ Acetic acid
- ✓ Animal repellents except thiram
